

ProACTIVE

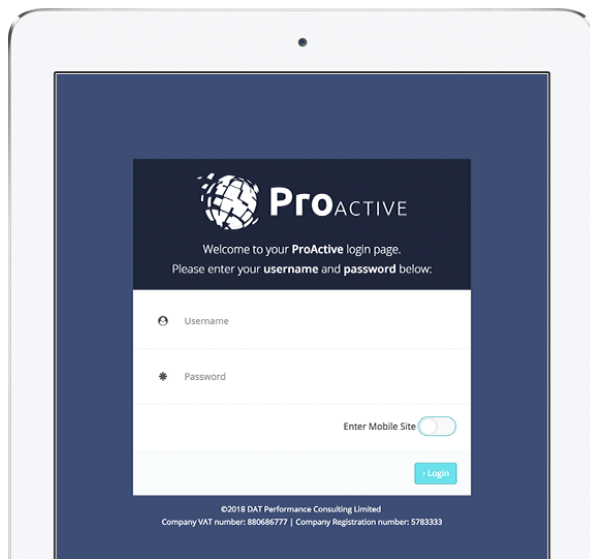

ProActive is the ultimate ISO compliance software, making globally recognised ISO, BRC Global and IATF standards easy to certify and maintain.

Compatible on a wide range of devices and accessible from any location with an internet connection – from the shop-floor to remote off-site locations. ProActive is fast, secure, intuitive and can be scaled to your business needs as required.

The feature set of ProActive is unrivalled and highly cost effective compared with other ISO compliance software packages.

ProActive ISO compliance software has a 100% first time certification record.

If you are considering which ISO management software will enhance the performance of your organization, remember that ProActive is the ultimate tool for your continual improvement drive.

ProActive can help you obtain the following standards and more:

ISO 9001

Quality Management Systems

ISO 14001

Environmental Management Systems

ISO 45001

Occupational Health & Safety Systems

ISO 27001

Information Security Management Systems

ISO 13485

Medical Instrument Quality Management Systems

ISO 50001

Energy Management Systems

IATF 16949

Automotive Quality Management Systems

ISO 55001

Asset Management Systems

BRC Global

Food Safety, Packaging and Storage
& Distribution Systems

Each ProActive installation can be tailored to your individual budget and business needs, with the flexibility to scale as required.

Rapid Access via Internet

Always online and accessible from anywhere with an internet connection, ProActive is powered by the latest technology to ensure that it is unmatched by any other management software on the market.

Updates to the system are pushed out seamlessly, with little to no downtime, and data is secured and backed up giving you peace of mind.

Dashboard Performance

Giving you a detailed overview of your key system functions at a glance, the ProActive dashboard allows you to access key areas of the system quickly. Open audits, open action logs, outstanding or planned equipment checks, competence reviews and records due for update are just a click away.

Action Logs

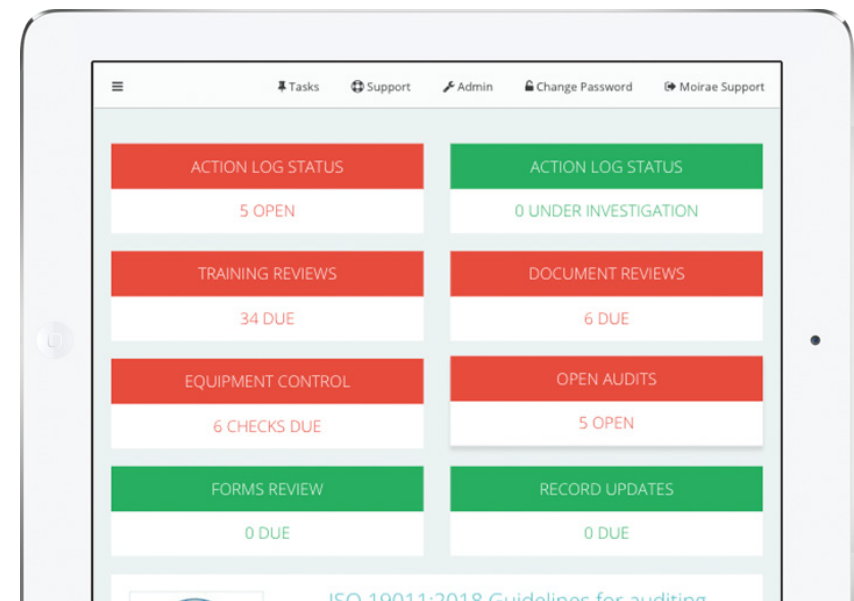

Log non-conformities, process improvements, root cause analysis and corrective actions with ease. The included reporting tools makes analysing the frequency of non-conformities and failure costs easy, coupled with the ability to upload supporting imagery and documents makes ProActive one of the most effective tools on the market.

Performance Reports & Analysis

ProActive includes a suite of reporting and analysis tools, with customisable filters that give you the ability to chart performance and capture key performance indicators of the data you want. ProActive can also export your reports to the Excel format giving you the ability to download and access your report data any time.

Audits

Get rapid access to planned, open and closed audits with ProActive's powerful audit suite. With an integrated audit action log for easy reporting of audit performance, closure of outstanding non conformities and an email alert system.

Document Retention

With ProActive, you gain access to a comprehensive range of document retention tools. System documents uploaded to ProActive are indexed with a unique version number and automatically deprecated when a new version is uploaded. Access control is given by your system administrators, ensuring the right people see the right documents.

Email Warnings and Alerts

Receive customised email alerts when tasks are due, across your entire ProActive system – including overdue action logs, competence reviews and document updates. These warnings and alerts can be sent to anyone you choose, making it easy for colleagues, suppliers and contractors to be informed when action is due.

White-Label Branding

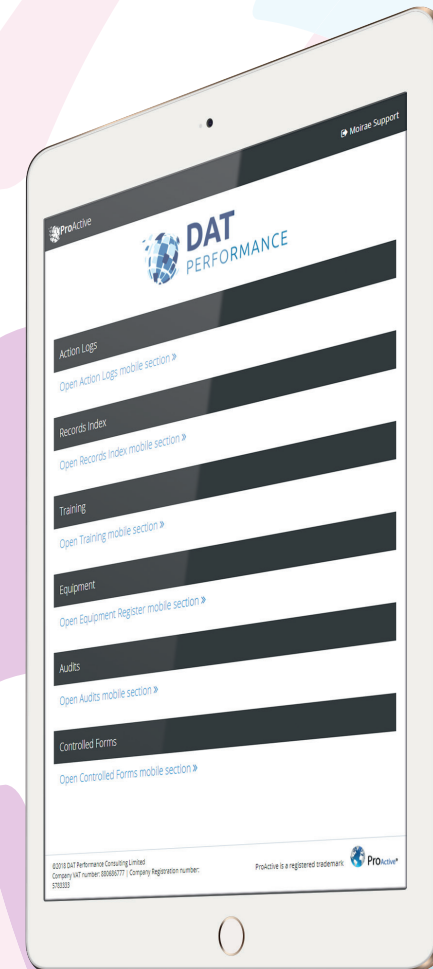

Each ProActive installation can be branded with your logo and customised from a range of themes and documents uploaded to your system will also be automatically branded with your logo, giving your system that extra professional touch.

Latest ISO News and Developments

The integrated news feed keeps you informed on external ISO developments that could impact conformity for your ISO systems, ensuring that you remain in the know. ProActive system improvements are also delivered via the news feed.

Ticket System (Customer Service)

A ticketing system drives ProActive's customer support service, letting you rapidly communicate any ProActive service issues or feedback to DAT.
